Create Auction Items

## Single item? Multiple donations? Fixed price?

Which auction creation PATH do I choose?

Create auction items BUNDLE

I have multiple donations (from one or more than one donor) to make up this ONE auction item

A single donation will be in this auction item and I want more control over the auction item values

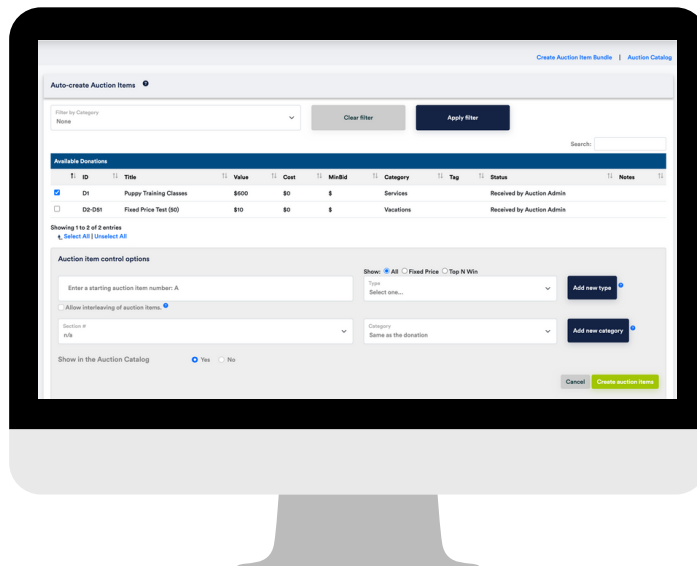

Create auction items from single donations - fixed price / top n

A single donation will be in this auction item

I have many duplicate donations to be sold at a flat/fixed price either online or on a bid sheet

I have many single donations to turn into single auction items and want to get them all done at once

It's ok, we know it can be confusing!

If you want an auction item to hold more than one donation: BUNDLE

If you are selling 25 T shirts for $15 each: FIXED PRICE

If you just want all 200 of your donations to each be their own auction item: SINGLE DONATION
